

## **Medical Transition & Minors, with lanka Michell (f15)**

CBD's exploration of systems continues with a look at the medical system. lanka will give us an overview and discussion on how patient wellness is studied for those who medically transition as minors. lanka's talk will focus on what is currently out there, possible mistakes to avoid when studying this topic and more. The presentation will be grounded in the ethic of "How can this field of research benefit the community being studied?"
