Mac Color Fix for Dark Images on Projectors

Your computer must be connected to the projector in question when you do this!

**System Preferences > Displays**

System Preferences is located under the Apple menu.

1. Select window that is NOT Color LCD
2. Uncheck “Show profiles for this display only”
3. Choose Adobe RGB

That will usually fix it, but if you want to tweak it more select Calibrate...
Click Next until you get to this screen.

Play with Gamma slider until image looks good. Click "continue"...

Again, see what looks better- 2.2 or 1.8
Leave this as "Native"

Give it a name that will make sense to you.

It should remember for next time, but if needed you can select it from this list.
