

Project Wirelessly from iPad or iPhone

- 1  On the iPad: make sure you are on "hampguest" wireless network.
- 2  Turn projector on.
- 3  Choose "Apple TV".
- 4  Press Home Button 2x
- 5  Swipe "recent apps" bar to right.
- 6  Touch Airplay icon. Choose room.
- 7  If needed, repeat steps 5 & 6 and turn mirroring on.
- 8  A code will appear on the projection screen. Enter it on the iPad.

Project Wirelessly from a Mac (Only works with OS 10.8 or higher)

- 1  Turn projector on.
- 2  Choose "Apple TV".
- 3  On your laptop: make sure you are using the "hampguest" wireless network.
- 4  Click the "Airplay" icon on the right side of your menu bar and choose room.
- 5  A code will appear on the projection screen. Enter it on your laptop screen.

Project a DVD or VHS Tape

- 1  Turn player on.
- 2  Insert disk or tape into player.
- 3  Turn projector on.
- 4  Choose "VCR/DVD".
- 5  Use remote or controls on deck to start screening.

No image? Choose a different input, then choose DVD/VCR again.

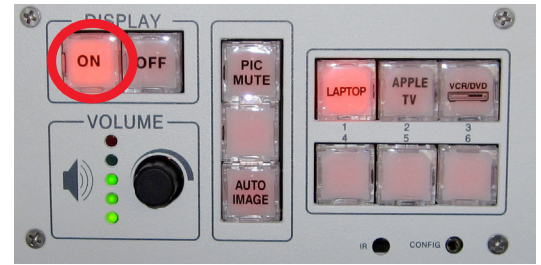

Project from Your Laptop

1

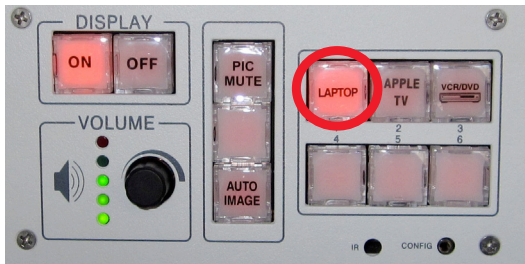

Connect cables (connecting Mac adapter to cable first, if needed) to your laptop.

2

Turn projector on.

3

Choose "Laptop".

4

Turn Computer on.

Laptop Troubleshooting

Not getting an image?

1. Switch to a different input on the switcher box and switch back to "Laptop".
2. Check that both ends of cables are connected properly.
3. Unplug cable (or mac adapter, if in use), wait 5 seconds, then plug it back in.
4. Put computer to sleep for 10 seconds, then wake it back up.
5. Restarting often helps, or see below...

Windows/PC

1. Press the "Fn" and "F8" keys together.
 - a. F8 is for Dell models. For IBM try F7 or F3; for HP try F4.
2. Keep pressing this combination and it will cycle through your various display options. One of them should work!

Mac

- Make sure to plug the dongle/adapter into the VGA cable FIRST, and THEN plug the dongle into your laptop.
- You can adjust Display options in your System Preferences- ie whether or not it mirrors your laptop to the projector, or treats the projector as a second screen.

Resolution Issues or Squished Image

- Look at your computer's Display Settings - the resolution going to the projector should be set to 1920 x 1080 at 60hz.
- Try setting the displays to "Mirror", this sometimes helps.

Powerpoint settings

If you're having problems with a slideshow, go to Slide Show > Settings or Set Up Show. Mirror screens, or use screen settings to choose primary screen.

No Audio?

- Use the knob on the wall switcher to raise and lower volume.
- Make sure small audio cable is connected properly at both ends.
- Check the volume settings on your laptop.
